ALL SPECIFICATIONS ARE AVERAGES AND SUBJECT TO CHANGE

The Ferret® 40mm Round is a frangible projectile filled with chemical agent. It is designed to deliver chemical agents in barricade situations from a 40mm launcher. Spin stabilization from fins and barrel rifling affords maximum stand-off distance and accuracy for safety.

The Ferret® 40mm Round is non-burning and suitable for indoor use. Used primarily by tactical teams, it is designed to penetrate barriers, such as windows and hollow core doors. Upon impacting the barrier, the nose cone ruptures and instantaneously delivers a small chemical payload inside of a structure or vehicle.

In a tactical deployment situation, the Ferret® 40mm is primarily used to dislodge barricaded subjects from very small confined areas. Its purpose is to minimize the risks to all parties through pain compliance, temporary discomfort and/or incapacitation of potentially violent or dangerous subjects.

The Ferret® 40mm Round is available with either liquid or powder carriers for the agent. Liquid carriers provide additional weight over the powder carrier improving barricade penetration potential. Once delivered, powder carriers tend to keep the agent airborne longer than liquid carriers and may have more effect. Liquid carriers contain red dye to aid in shot placement.

Shot placement and trajectory considerations should be based on hardness of the barrier. However, accuracy is dependent on the operator and the condition of the launcher. The Ferret® 40mm Rounds possess greater penetration capabilities than the Ferret® 37mm Rounds. **DIRECT FIRING THE FERRET® ROUNDS AT ANY INDIVIDUAL CAN CAUSE DEATH OR SERIOUS BODILY INJURY.**
