The Stinger® Grenade is a combination Less Lethal Impact Munitions and Distraction Device® that may incorporate optional CS or OC laden powder, if desired. The Stinger® Grenade is a maximum effect device as it delivers up to four stimuli for psychological and physiological effect: rubber pellets, light, sound, and optional chemical agent or OC.

The Stinger® Grenade has an initial 1.5 second delay that initiates fuze assembly separation, followed by another 0.5 second delay before the function of the device. The blast is sufficient to project the rubber balls and optional chemical agent in a 50 foot radius.

The Stinger® Grenade is most widely used as a crowd management tool by law enforcement and corrections in indoor and outdoor operations. However, as with any pyrotechnic device, firefighting equipment should be available. It has also proven successful in tactical operations.

As a pain compliance, distraction and disorientation device for crowd management, it may be hand thrown or launched in the general direction of the crowd. It may be deployed for ground bursts or aerial bursts at the discretion of the operator. It is generally reserved as a last selection when chemical agents and less lethal impact munitions have not resolved the disorder or routed the crowd. It has been used quite successfully for several years in correctional and jail facilities against non-compliant or riotous inmates.
