The Instantaneous Blast Grenade is designed for indoor or outdoor use; this grenade's powder is expelled upon initiation of a small internal detonator that has sufficient force to split the canister at six (6) machined grooves on the outside surface.

The Instantaneous Blast Grenade is most commonly used in crowd control situations by Law Enforcement and Corrections and was designed with indoor and outdoor operations in mind when a non fire-producing delivery system is desired. It is most effective when used in confined areas and close to the target area.

The purpose of the Instantaneous Blast Grenade is to minimize the risks to all parties through pain compliance, temporary discomfort and/or incapacitation of potentially violent or dangerous subjects.

This powder carrier may make this device less suited for outdoor operations where wind conditions may quickly move the agent past the target zone. However, this device is well suited for affecting numerous subjects grouped within a contained portion of a prison yard or area, using wind to the advantage.
