**ALL SPECIFICATIONS ARE AVERAGES AND SUBJECT TO CHANGE**

The Golden Eagle Pepper Fog Generator features a revolutionary new electric starting system which eliminates hand pumping and assures greater reliability, effectiveness, fuel efficiency, and ease of operation. It is powered by a resonant pulse jet engine capable of producing 100,000 cubic feet of irritant or inert training smoke in 26 seconds. The unit operates on a thermal aerosol principle using extreme heat to vaporize liquid formulations of CN, CS, OC and Smoke. The Pepper Fog Generator is gasoline-powered and will run approximately 40 minutes on a tank of fuel. The formulation tank has a one-gallon capacity which lasts up to one hour. The unit may be carried with a strap or mounted on a vehicle.

The fogger unit is applicable to any crisis or control situation that requires extended area coverage. In a law enforcement/outside civil disturbance situation, the unit can be used for routing and movement of large crowds. Applications in a corrections environment would include inmate control in a DOC situation to clear or control larger numbers, either indoors or out (yard or dining facility). The type of agent used would be determined by the location (enclosed or open air) and whether or not the object was to route/direct the crowd, or subdue in place of arrest and control.
